Soil Erosion and Sediment Control Measures

SE/SC Seminar Registration Form

Proper erosion and sediment control practices have been proven to reduced the amount of sediment and other non-point source pollutants in stormwater runoff from construction sites. Created for engineers, contractors, developers, site inspectors, and landowners, this seminar will make it easy to understand local, state, and federal rules and regulations that relate to soil erosion and sediment control for construction sites as well as guidelines for BMP design, installation, and maintenance. Sessions will cover regulatory requirements for SESC measures, guidelines for planning and installation of BMPs, site inspection guidelines, and will include information on the newest technologies and practices to protect water quality in urban and developing areas.

CPESC credits are available for attendance at the workshop. Please note on the registration form if credit is needed.

To register, return the registration form with registration fee to the Will-South Cook Soil and Water Conservation District by February 29, 2012. Space is limited.

Workshop Agenda
